

## Lifestyle and environmental determinants of seminogram and other male fertility related parameters

### A unique multicentric international research study

It is estimated that **15% of couples experience** infertility, and the prevalence of infertility is increasing worldwide. Male factor contributes to approximately 50% of cases.

**Do you want to participate in a study where researchers from the Rovira i Virgili University identify and analyze the lifestyle determinants associated with sperm quality?**

**WE NEED HEALTHY MEN  
VOLUNTEERS FROM 18 TO 40 YEARS**  
**Only one visit is required to participate**
